

IDEAS WORKSHOP SUMMER 2017
WEEK 1

UTHAIPON TANTIPONGPIPAT

Problems are simple to solve. Only last two problems need some function to be defined.

The hardest thing is rather to be familiar with GitHub. Desktop version makes life a lot easier.

Anaconda creates me a Python 3 notebook with extension .ipynb. Is it similar to .py ? The notebook makes it more like mathematica rather than running a programming language. However, having written Java and C++ before, I feel that Python is lot easier and more intuitive.
